

Press Release

IJmuiden (NL), January 8, 2014

IJPOS – At your service

Established last summer, IJPOS is a completely new cooperation of 22 companies located in the harbour of IJmuiden (Netherlands). Our goal: Globally promoting the idea of the harbour of IJmuiden as a one-stop shop for the shipping and offshore-industry. IJPOS contributes to the regional economic growth and additionally increases employment in the harbour through combining efforts, sharing knowledge and a collective platform of communication. The website www.ijpos.nl is currently online and a national and international PR-campaign has been launched.

Cooperation through combining efforts and sharing knowledge

IJmuiden Port & Offshore Services (IJPOS) consists of a group of service oriented businesses in the (open) port area. All companies involved represent different specialisms, varying from hydraulic systems to towing-services and from waste processing to electronic installations and ship repair. Even non-technical services are offered, such as delivery of hydrographic systems of measurement and navigation equipment. Thanks to a close collaboration within our network, we are able to provide services of a higher quality and of more diversity.

Growth and employment

The collaboration has already resulted in some interesting projects during the last couple of months:

- Wesco IJmuiden used the services of IJPOS members and other suppliers in the port area of IJmuiden for various mounting and repairing activities on dredging vessels and ships for windmill parks.
- Commissioned by Imtech, Nautikaris developed the accuracy measurement instrument F180: completely checked, calibrated and ready to operate.

Our various points of attention are further elaborated in the year plan of 2014. The motto is calmly building on the future of the harbour, and simultaneously on the future of the entrepreneurs. Visit our website for more information: www.ijpos.nl
